Dual Stage Universal Filtration System

VFK-2U

Installation, Use & Care Guide
(Customer must read this manual thoroughly before installing the system)

CONSUMER: Retain this manual for future reference.
Questions, problems, missing parts? Before returning to your retailer, call our customer service department at:
1 (877)-447-4768. 8:30am-4:30pm CST, Mon - Fri or email us at customerservice@ghpgroupinc.com
www.ghpgroupinc.com

GHP Group
USA: 6440 W. Howard Street, Niles, Illinois 60714
Canada: 271 Massey Road, Guelph, Ontario, N1K 1B2

Printed in China
Safety Precautions:

- You must follow the guidelines to install this system. Check with your Province/State and local public works department for plumbing and sanitation codes.
- If house water line pressure is over the maximum 100 psi (pounds per square inch), install a pressure regulator in the water supply line before this system.
- System is for cold water use only and must be protected against freezing, which can cause water leakage.
- Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system. Systems certified for cyst reduction may be used on disinfected wares that may contain filterable cysts.
- Make sure the water supply conforms to the specification guidelines. If the water supply conditions are unknown, consult your local municipal water company or health department about the quality and the list of contaminants of the water in your area.
- While using the system for the first time, or prolonged non-use (such as during a vacation over one week), the system should be flushed thoroughly.
  
  **CAUTION: Let water run for 15 minutes to rinse the system before using.**

- This system contains two replaceable filter cartridges with a limited service life. 
  
  **CAUTION: Changes in taste, odor, color and/or flow of the water being filtered indicate that the cartridges should be replaced.**

Conditions for Operation:

Flow Rate ......................................................... 0.5 GPM (1.9 LPM)
Min./Max. Operating Pressure .................. 30 - 100 psi (207- 698 kPa)
Min./Max. Operating Temperature ........... 40 - 113°F (4.4 -45°C)
Replacement Cartridge ......................... VRFU-42/53CTO (Carbon Block) and VRFU-PP (Sediment)
Capacity ..................................................... 1,000 Gallons (3,780 Liters)
### Package Contents:

### Tools Required for Installation:

- Teflon Tape
- Adjustable Wrench
- Pliers
- Phillips Screwdriver
- Utility Knife
- Measuring Tape
- Drill and Bits
Installation Instructions:

Tapping into Cold Water Line (See Figure 1):
CAUTION: The water supply to your unit MUST be from the COLD WATER LINE. Hot water will severely damage your filtration system.

1. Turn off the cold water supply by turning off the shut off valve under the sink. If the cold water line does not have a shut off valve under the sink, turn off the main water line in the house. Place a tray or towel under the cold water line to catch the excess water.

2. Turn on the cold water faucet and allow all the water to drain from the line. On a single handle faucet, the hot water may have to be turned off to prevent any hot water cross over.

3. Loosen nut and separate cold water braided flex line from the kitchen cold water faucet shank. Attach the Inlet Valve (G) to the faucet shank using the Rubber Washer (H). Reinstall the flex line onto the Inlet Valve (G) and tighten with an adjustable wrench. Use Teflon Tape on all threaded connection points.

Drilling the Faucet Hole (See Figure 2):

The drinking water faucet should be positioned with function, convenience and appearance in mind. An adequate flat area is required to allow faucet to rest securely. Check the underside of the location for interference. Most sinks have a pre-drilled 1¼" or 1½" diameter holes designed for spray hoses. The drinking water faucet may be installed using one of these holes, despite their larger size. If the pre-drilled holes cannot be used, or are in an inconvenient location, it will be necessary to drill a minimum ½" hole in the sink or through the countertop next to the sink or the faucet.

CAUTION: Do not drill through a counter top that is more than 1" thick.
CAUTION: Do not attempt to drill through a tiled, marble, granite or similar countertop. Consult a plumber or the countertop manufacturer for advice or assistance.

4. Line the bottom of the sink with newspaper to prevent shavings, parts, or tools from falling down the drain.

5. Place masking tape over the area to be drilled to help prevent scratches if drill bit slips.

6. Mark point with a center punch. Use a ½" or ⅝" drill bit to drill a hole.

7. Smooth rough edges with a file.
Installation Instructions (continued):

Installing the Faucet (See Figure 3):

8. Guide Escutcheon Plate (K) and Rubber Gasket (L) onto the stem of the faucet. Slip the stem into the hole and make sure it sits flat on the top of the sink or countertop surface.

9. From underneath the sink, slide Plastic Lock Washer (M) and Star Washer (N) up along the stem, then screw Steam Nut (O) all the way up the stem until it’s flush with Star Washer. Screw with an adjustable wrench until it’s slightly sung and check to make sure the faucet spout is in the proper position.

Installing the Filter Cartridges and Sump (See Figure 4):

10. Tear off the seal package of the filter cartridges.

11. Insert Sediment Cartridge (C) over the standpipe in the bottom of Filter Sump (B). Ensure that the two O-rings on the sump are properly set in the grooves.

Note: The grease applied on O-rings tested by NSF are food safety.

12. Screw the sump to the inlet side of Head Assembly (A) and hand-tighten in counterclockwise direction. Use Sump Wrench (T) to tighten, making sure the seal marks on the head and sump are aligned. Note: Don’t over tighten.

13. Repeat above steps to install Carbon Block Cartridge (D) into another sump to the outlet side of the head assembly.

CAUTION: When looking at the system from the front, the Sediment Cartridge must be on the left and the Carbon Block Cartridge must be on the right.

Mounting the System under the Sink (See Figure 5 on next page):

14. Choose an easy to access area under the sink to mount the system.

Note: There must be a 2" minimum clearance between the bottom of Filter Sump (B) and the floor of cabinet to facilitate easy replacement of filter cartridge.

Note: Mount the system to a solid cabinet wall. If a solid wall is not available, use hollow-wall anchor bolts or toggle bolts (not included) to secure to the wall.

15. Use the Pre-Assembled Head Assembly (A) as a template, mark the holes for positioning the system on the wall surface.

16. Insert Mounting Screws (F) into the wall with a Phillips screwdriver. Leaving approximately 3/8" of each screw exposed. Hang the system through the eyes of the bracket on the screws. Tighten the screws to secure the system.
Connecting the 1/4" tubing from Water Line to the System. (See Figure 5):

17. Determine the length of 1/4" Tubing (E) from Inlet Valve (G) to the inlet of Head Assembly (A) by holding tubing in place ensuring it’s of appropriate length. Cut the tubing square with a utility knife.

**CAUTION:** Don’t kink tubing as this will impede water flow.

18. Wet one end of the tubing with water and push it onto the guide tube of the valve until it stops.

19. Wrap Teflon Tape around the thread of the valve, and hand-screw the Inlet Compression Nut (I) on the valve and tighten with adjustable wrench.

20. Push other end of the tubing into the inlet of Head Assembly (A) by referring the instruction of “Tubing Connection with Push-in Fitting” on the next page.

Connecting the 1/4" tubing from the System to the Faucet. (See Figure 5):

21. Determine the length of 1/4" Tubing (E) from the outlet of Head Assembly (A) to the stem of the Faucet (J) by holding tubing in place ensuring it’s of appropriate length. Cut the tubing square with a utility knife.

**CAUTION:** Don’t kink tubing as this will impede water flow.

22. Gently slide Faucet Compression Nut (R) down over the tubing. Follow with Ferrule (Q). Push Insert (P) into the end of the tubing.

23. Wrap Teflon Tape around the thread of the stem.

24. Firmly push the tubing into the stem of Faucet (J) until it stops. Hand-screw the nut onto the threads of the stem. Tighten with a wrench.

**CAUTION:** Don’t overtighten the compression nut.

25. Push other end of the tubing into the outlet of Head Assembly (A) by referring the instruction of “Tubing Connection with Push-in Fitting.”
Installation Instructions (continued):

Tubing Connection with Push-in Fittings. (See Figure 6, 7 and 8):

26. Take off the blue horseshoe clip from collet. See Figure 6:

27. Pull out and discard the protect plug by pushing the collet inward and holding with fingers. See Figure 7:

28. Insert Tubing (E) into the collet. Full engagement is 11/16" length of the tubing into the fitting. See Figure 8:

   NOTE: Ensure tubing is pushed all the way to backstop.

29. Put blue horseshoe clip back on collet.

30. To pull tubing out, simply repeat Steps 26 to 27.

Start-up Instructions:

1. Turn Inlet Valve (G) to open position and the cold water sink faucet to the closed position.

2. Slowly open the cold water supply valve that you closed at the beginning of this installation.

3. Open Faucet (J) to purge air from the system. When the water runs smooth with no bubbles or spurting, close the faucet and check for leaks for all fittings.

4. Open the Faucet (J) again to rinse the system.

   CAUTION: Let water run 15 minutes before using.

   NOTE: Initially, there may be some dark discoloration of the water (carbon deposits). This condition is normal and will disappear quickly.
NOTE: The filters have a life expectancy between 6 to 12 months, depending on the incoming water conditions and the amount of water the system uses. You must periodically replace the filters. The replacement filter can be obtained online at www.ghpgroupinc.com or at the retail store the system was purchased.

1. Turn off Inlet Valve (G), and open Faucet (J) to relieve pressure of the system. Place a tray or towel under Filter Sumps (B) to catch excess water.
2. Unscrew the sump by turning Wrench (K) in clockwise direction and remove old cartridge.
3. Wash the sump throughout with mild soap and water and rinse thoroughly.
4. Replace new filter cartridge(s) by following the step 10 to 13 of Installation Instruction.
5. Slowly open the inlet valve that you closed at the beginning of this installation.
6. Open the Faucet (J) to purge air from the system. When the water runs smooth with no bubbles or spurting, close the faucet and check for leaks. If any leaks, tighten the sump as needed.
7. Open the Faucet (J) again to rinse the system.

CAUTION: Let water run 15 minutes before using.

NOTE: Initially, there may be some dark discolouration of the water (carbon deposits). This condition is normal and will disappear quickly.

Filter Cartridge Replacement Instructions:

For further operating, installation, or maintenance assistance call GHP Group Inc. customer service department at 1 (877)-477-4768 Mon. - Fri. 8:30 a.m. – 4:30 p.m. CST or email us at customerservice@ghpgroupinc.com

Troubleshooting:

Performance Data:

Caution: Read this performance data and compare the capability of this system with your actual water treatment needs. It’s recommended that, before installing the system, you have your water supply tested to determine your actual water treatment needs.

The system conforms to NSF/ANSI Standard 42 and 53 for the specific performance claims as verified and substantiated by test data. While testing was performed under standard laboratory conditions, actual performance may vary.

This system has been certified by NSF International according to NSF/ANSI 42, 53 and CSA B483.1 for the reduction of substances listed below. The concentration of the indicated substances in water entering the system was reduced to a concentration less than or equal to the permissible limit for water leaving the system as specified in NSF/ANSI 42/53.

**VFK-2U with VRFU-PP and VRFU-42/53CTO filter Cartridges**

Warranty:

Limited Warranty:
This limited warranty is extended to the original retail purchaser of this filtration system and warrants against any defect in material and workmanship for a period of one (1) year from the date of retail sale. GHP Group, Inc., at its option, will either provide replacement parts or replace the unit, when properly returned to the retailer where purchased or one of our service centers as directed by GHP Group, Inc., within one (1) year of retail purchase. (Shipping costs, labour costs, etc. are the responsibility of the purchaser.)

Duties of the Owner:
This filtration system must be installed and operated in accordance with the written instructions furnished with this system. This warranty shall not excuse the owner from properly maintaining this unit in accordance with the instructions. A bill of sale, canceled check or payment record must be kept to verify purchase date and establish warranty period. Original carton should be kept in case of warranty return of the unit.

What is Not Covered?
1. Damage caused by misuse, installation or use contrary to the owner’s manual and safety guidelines.
2. Use of this product where water is microbiologically unsafe or of unknown quality.
3. Damage of caused by a lack of normal maintenance and cleaning.
4. Use of non-OEM parts or accessories.
5. Damage caused in transit. Freight charges on warranty parts or products to and from the factory shall be the responsibility of the owner.

THIS LIMITED WARRANTY IS GIVEN TO THE PURCHASER IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY OF FITNESS FOR A PARTICULAR PURPOSE. THE REMEDY PROVIDED IN THIS WARRANTY IS EXCLUSIVE AND IS GRANTED IN LIEU OF ALL OTHER REMEDIES. IN NO EVENT WILL GHP GROUP, INC. BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES.

Some states/provinces do not allow limitations or how long an implied warranty lasts, so the above limitation may not apply to you. Some states/provinces do not allow the exclusion or limitation of incidental or consequential damages so the above limitation or exclusion may not apply to you.

Claims Handles as Follows:
1. Contact your retailer and explain the problem
2. If the retailer is unable to resolve the problem, contact our Customer Service Dept. detailing the system model, the problem, and proof of date of purchase.
3. A representative will contact you. DO NOT RETURN THE UNIT TO GHP GROUP, INC. unless instructed by our Representative, or written authorization.

This warranty gives you specific legal rights and you may also have other rights that vary from state/province to state/province.

TO REGISTER THIS WARRANTY PLEASE FILL OUT THIS CARD COMPLETELY AND MAIL WITHIN FOURTEEN (14) DAYS FROM THE DATE OF PURCHASE OR REGISTER ON-LINE AT www.ghpgroupinc.com
